PROFESSIONAL SUMMARY

Full-stack Software Engineer with 3+ years building distributed backend systems (Java, Spring Boot, Kafka, Kubernetes) and modern frontend experiences (React, TypeScript) — architecting event-driven platforms that process 10M+ events/day at scale, and shipping end-to-end features spanning API design through UI delivery. Experienced in large-scale distributed systems, system design, performance tuning, cross-team design reviews, and mentoring engineers.

TECHNICAL SKILLS

Programming Languages	Java (8, 11, 17), Golang, Kotlin, C++, SQL, JavaScript, TypeScript
Backend Development	Spring Boot, Spring MVC, Hibernate, J2EE, REST APIs, API Gateway, Microservices, Event-Driven Architecture, Apache Kafka, Temporal, Fault Tolerance
Frontend Development	React, TypeScript, HTML5, CSS, REST/JSON Integration, Component-based Architecture
Distributed Systems	Scalability, High Availability, Fault Tolerance, Load Balancing, Infrastructure as Code
Cloud & DevOps	AWS, Azure, Kubernetes, Docker, Container Orchestration, CI/CD, IAM, TLS
Databases & Caching	Cassandra, PostgreSQL, MySQL, Redis, NoSQL, Query Optimization, Indexing, Partitioning, Caching, JVM Tuning
Testing & Observability	JUnit, Mockito, JMeter, Prometheus, Grafana, Datadog, TDD, TestNG, Karate, Distributed Tracing
AI & Developer Tools	Spring AI, OpenAI API, Anthropic API, GitHub Copilot, Claude Code, Model Context Protocol

PROFESSIONAL EXPERIENCE

Software Development Engineer II — ZopSmart

Apr 2025 – Present

- Architected a distributed, event-driven backend platform in Java, Spring Boot, and Kubernetes with PostgreSQL, powering real-time inventory visibility at **10M+ events/day**.
- Reduced **P95 API latency by 25%** through JVM performance tuning, GC optimization, and SQL/caching improvements.
- Cut **production incident rate by 50%** using idempotent processing, retries, DLQ recovery, and circuit breakers.
- Built a full-stack item-ingestion dashboard (TypeScript, React, Spring Boot) tracking **100+ CPGs and 20+ vendor sources**, cutting manual triage time by **50%+** across 5+ teams.
- Integrated MCP calls to auto-load org-specific UI templates, cutting frontend dev time by **70%+** via AI-driven, spec-driven development (SDD).
- Drove **design reviews** across a 6-engineer team, codifying idempotency, API stability, and fault-tolerance standards as team baseline.
- Piloted Spring AI and MCP integration for incident triage, **mentoring 3 engineers** on GenAI-assisted development.
- Authored **incident runbooks and ADRs** that cut on-call MTTR by 25%, communicating trade-offs to engineering leadership.

Software Development Engineer I (promoted from SDE Intern) — ZopSmart

Feb 2023 – Mar 2025

- Led a **40M+ record migration** from a legacy monolith to Cassandra, building validation and dual-write checks for a **zero-data-loss cutover**.
- Engineered **Kafka + Apache Storm** real-time pipelines for retail event processing, sustaining **~10K TPS** across multi-tenant clusters.
- Tuned Cassandra consistency, compaction, and partition-key design — reducing **p99 read latency by 25%** and eliminating cluster hotspots.
- Built end-to-end observability with **Prometheus, Grafana, and Datadog** — compressing MTTD and MTTR on Sev-1 incidents by 50%.
- Designed **6 REST microservices** in Java and Spring Boot with Spring Data JPA, serving **15M+ requests/day** across 6-7 downstream consumers.
- Introduced BDD automation (Karate, Gherkin) achieving **95%+ test coverage** and cutting **regression cycle time by 50%**; led on-call RCAs for enterprise retail clients.

EDUCATION

Jaypee University of Engineering and Technology, Guna

2019 – 2023

B.Tech, Computer Science and Engineering
